

NUMERACY CLASS PACKS FOR WORKSHOPS

Our Class packs for workshops consist of 30 packs of the chosen Maths package for use in the workshop and then for the pupils to take home for working with an adult on the homework package. Please note that when these maths packs are purchased, the class teacher will be required to print the homework off each week, at the appropriate level for each child.. This is provided on the CD Rom/USB.

Each pack will contain everything you need to run the workshop with pupils - but you must purchase the teacher pack in order for you to be able to run it, as this will give you the CD Rom with the year group powerpoints and programme manual that will explain the programme and give an overview of how to run it. You are at liberty to make your own class packs using the materials on the CD Rom/USB, but many schools have found it cheaper to buy these from Impact in Learning, when they consider the cost of the materials plus the labour involved.

Key Stage 1/EYFS Owl and Pussycat Class Packs of 30.
